The inverter is an electronic device that converts the dc voltage to ac voltage with the help of Step-up transformers. The inverter is essential in a time of electricity failure or load shutdown of the power in your house. This homemade inverter circuit will provide the same frequency and voltage needed for your electrical equipment.

The inverter would need to be 1500-2000 watts to power the Microwave(13 amps at 110V). This would mean drawing over 100 amps at 12 volts. Fine, I thought, I have 200 amps. But then I read somewhere about a "Ping Pong" effect. What that means is that one of the batteries BMS system would detect 100 amps and shut off.
