Can a 120 watt solar panel run appliances?

120 watt solar panel can produce enough power to run most of the basic appliances like a fridge for a few hours, TV, laptop, phone, LED bulbs, fans, etc with the help of a battery during camping or in case of any emergency. Follow these rules before running any appliance on a 120 watt solar panel.

How many kWh do solar panels generate a year?

We will also calculate how many kWh per year do solar panels generate and how much does that save you on electricity. Example: 300W solar panels in San Francisco, California, get an average of 5.4 peak sun hours per day. That means it will produce  $0.3\text{kW} \times 5.4\text{h/day} \times 0.75 = 1.215\text{ kWh}$  per day. That's about 444 kWh per year.

Among the various solar panel options, 120 Watt Solar Panels offer a perfect balance between size, power output, and affordability. These panels are ideal for both residential and commercial applications, providing enough power to run small to medium-sized appliances or to complement larger solar power systems.

On average, a 120 watt solar panel will produce about 90 - 100 DC watts during peak sun hour (1kW/m<sup>2</sup> of solar radiation hitting the surface of solar panel). And 450 - 500 DC watt-hours per day, considering 5 peak
