

Will China's new energy storage capacity be 30 gigawatts by 2025?

China is targeting new-type energy storage installed capacity of 30 gigawatts by 2025, part of efforts to boost renewable power consumption and ensure grid stability, according to a statement by the National Development and Reform Commission and the NEA.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9 GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

How much money did energy storage companies raise in 2022?

In 2022, industry players raised RMB 32.5 billion in Series A and Series B funding, accounting for 66% of the total (Figure 16). From a regional perspective, energy storage enterprises in the top 10 provinces raised a total of RMB 45.3 billion in 2022, accounting for 92% of the national total.

What is China's energy storage capacity in 2022?

In 2022, China's cumulative installed NTESS capacity exceeded 13.1 GW, with lithium-ion batteries accounting for 94% (equivalent to 28.7% of total global capacity). China is positioning energy storage as a core technology for achieving peak CO₂ emissions by 2030 and carbon neutrality by 2060.

Which countries raise the most energy storage funds in 2022?

China, the US, and Europe are the main players. In 2022, they accounted for 90% of global energy storage-related fundraising deals (China for 46%, the US for 31%, and Europe for 13% respectively), raising USD 2.9 billion, USD 2 billion, and USD 800 million, respectively (Figure
