It stores our solar energy. Use a single 48-volt battery or stack 12/24-volt batteries like blocks. Next, the sunflower: the solar panel array. It soaks up the sunshine and makes electricity. For 48 volts, we need a higher voltage array, like 60+ volts. Use high-voltage panels or connect 12-volt panels in series like links in a chain.

Charge Controllers. For a quick moment, let's review the two different types of charge controllers - PWM and MPPT. PWM serves as a simple on/off switch that monitors the charge coming in from the solar panels. When using a PWM charge controller, the nominal voltage of the panel array needs to match the voltage of the battery bank.
