Energy Storage System Reduce energy and peak power costs ENVILINE ESS ENVILINE ESS is a wayside Energy Storage System (DC connected) which recovers, stores and returns the surplus braking energy to the DC network, helping to reduce the total energy consumption of a rail transportation system up to 30 percent.

operates the limit switches 97612 (Fig. 1) and determines how far the disc spring assembly travels. The energy storage level for the HMB mechanism is solely determined by the amount of distance the disc spring assembly is compressed. There are no hydraulic pressure gauges or pressure switches. Instead, limit switches start and stop the spring
