determines how far the disc spring assembly travels. The energy storage level for the HMB mechanism is solely determined by the amount of distance the disc spring assembly is compressed. There are no hydraulic pressure gauges or pressure switches.

18. Can I use an external handle and shaft with a motorized change-over switch or automatic transfer switch? No. It is only allowed to use the direct mount handle (emergency handle) to operate switch manually. 19. What is the transfer time of the Automatic Transfer Switches? The OFF time range is of 0,4 - 1,5 seconds.
