

Ac power failure alarm system

What is AC power failure?

This trouble condition will appear when electrical power to the system has been interrupted. Your backup battery will provide power to your system while this condition exists. Please refer to the following troubleshooting steps to resolve AC power failure issues that your system may be encountering.

What does AC power failure mean on my security system?

An AC power failure on your security system means that it's not receiving power from a wall outlet. The system switches to its backup battery during this time. However, a battery can only keep the system running for a limited period, so it's crucial to restore regular power.

How does a power fail alarm work?

Power fail alarm continuously monitors 120V AC power outlets and if there is an interruption, the LED flashes and a 102dB beeping alarm sounds to let you know. The alarm can be silenced by pushing the green button. A selectable "snooze alarm" feature will cause the alarm to come back every 30 minutes until power is restored.

What if my AC outlet is still in power loss?

If the outlet has power but the system is still in AC power loss, please contact Guardian for assistance at 1.800.PROTECT (1.800.776.8328). Once the power is restored to the system, the backup battery will be recharged. Discover how to resolve an AC Power Failure by following the steps in this Guardian Protection support article.

Why is my AC panel showing a loss condition?

Different panels have different power requirements, and using the incorrect transformer could result in serious system damage. If your panel is showing an AC loss condition, then it means that the system is not receiving enough electrical power from the AC outlet. It might be receiving insufficient power, or it might be receiving no power at all.

How do you fix an AC power failure?

To fix an AC power failure in a security system, the user must restore the plug-in power for their system. If the electricity is out, they will need to either wait for the power to come back or find an alternative power source, such as a generator. If the transformer is not plugged-in, they should plug it back into the wall outlet.
