

1 Introduction. With the increasing demand for Internet of Things (IoT) services, the International Data Corporation estimates that by 2025 there will be over 55 billion interconnected devices [] --an equivalent to seven devices for every person on the planet. This rapid growth also adds on the expected higher electricity demands (an increase of 5% in 2021 []), the majority of ...

Perovskites have emerged as promising light harvesters in photovoltaics. The resulting solar cells (i) are thin and lightweight, (ii) can be produced through solution processes, (iii) mainly use low-cost raw materials, and (iv) can be flexible. These features make perovskite solar cells intriguing as space technologies; however, the extra-terrestrial environment can easily cause the ...

2.2 Efficiency. The efficiency varies based on the type of the tandem cell, and the highest achieved efficiency for perovskite/CIGS tandem cell was 24.2 and 25.5% for all perovskite tandem cells (Best Research-Cell Efficiency Chart 2022). Similarly, for the perovskite/Si tandem cells an efficiency of 29.15% was achieved in 2020 (Al-Ashouri et al. 1979), then improved by ...

Photovoltaics: Advances in First Principles Modeling - Overview Marco Bernardi and Jeffrey C. Grossman Contents ... (Jean et al. 2015). Examples are hybrid halide perovskites, which have been a primary focus of recent PV research (Liu et al. 2013; Green et al. 2014). Halide perovskites possess several desirable properties,

Moreover, it will be showing new models of solar cells as well as advances and challenges in the development of inorganic and organic solar cells with high efficiency and stability. ... :1801793; (c) Lu L, Zheng T, Wu Q, Schneider AM, Zhao D, Yu L (2015) Recent advances in bulk heterojunction polymer solar cells. Organic solar cells have emerged as promising alternatives to traditional inorganic solar cells due to their low cost, flexibility, and tunable properties. This mini review introduces a novel perspective on recent advancements in organic solar cells, providing an overview of the latest developments in materials, device architecture, and performance optimization. In ...

1 Introduction. Recent years have witnessed a steady increase of energy production from renewable resources. In particular, the greatest increment has been registered for household-size grid-connected photovoltaic (PV) energy production, due to the possibility to install low power plants easily integrated into the urban

environment, the so-called domestic PV.

Abstract-- Photovoltaics is developing around the world at the fastest rate in comparison with all other renewable energy sectors and demonstrates, owing to the improvement of relevant technologies and growing amounts of equipment manufacture, a significant decrease in both specific capital outlays per unit installed capacity of power installations and in the ...

Advances that have been made in the application of perovskites to building-integrated photovoltaics (BIPVs) in four areas are highlighted: semitransparent windows, colorful wall facades, electrochromic windows, and thermochromic windows. Perovskite-based solar cells have attracted great attention due to their low cost and high photovoltaic (PV) performance. In ...

Semiconductors and Semimetals has distinguished itself through the careful selection of well-known authors, editors, and contributors. Originally widely known as the "Willardson and Beer" Series, it has succeeded in publishing numerous landmark volumes and chapters. The series publishes timely, highly relevant volumes intended for long-term impact ...

This work reviews recent advances in stretchable OPVs, including the design of mechanically robust transparent electrodes, photovoltaic materials, and devices. Initially, an overview of the characteristics and recent research progress in the areas of structurally and intrinsically stretchable OPVs is provided.

Advances in Organic Photovoltaic Cells: Fine-Tuning of the Photovoltaic Processes. Morongwa E. Ramoroka, ... solar cells, supercapacitor, and water treatment applications. ... and the ICTP-ANSOLE Africa-North Exchange Program Fellowship - hosted by LIOS in 2015. Samantha F. Douman obtained her B.Sc. and Ph.D. degrees in chemistry from the ...

Background In recent years, solar photovoltaic technology has experienced significant advances in both materials and systems, leading to improvements in efficiency, cost, and energy storage capacity. These advances have made solar photovoltaic technology a more viable option for renewable energy generation and energy storage. However, intermittent is a ...

Perovskite solar cells (PSC) have been identified as a game-changer in the world of photovoltaics. This is owing to their rapid development in performance efficiency, increasing from 3.5% to 25.8% in a decade. Further advantages of PSCs include low fabrication costs and high tunability compared to conventional silicon-based solar cells. This paper reviews existing ...

Perovskite-based solar cells have attracted great attention due to their low cost and high photovoltaic (PV) performance. In addition to their success in the PV sector, there has been growing interest in employing perovskites in energy-efficient smart windows and other building technologies owing to their large absorption coefficient and color tunability.
