locations but not others, and commercial wind turbines span 200 feet or more and can cost millions of dollars.

5. Wind Energy - What is it? All renewable energy (except tidal and geothermal power), ultimately comes from the sun. The earth receives 1.74×10^{17} watts of power (per hour) from the sun. About one or 2 percent of this energy is converted to wind energy (which is about 50-100 times more than the energy converted to biomass by all plants on earth). Differential ...

This is the reason for the urgency to find an alternative. And wind energy fits the bill perfectly as it ticks all the boxes. Disadvantages of wind energy 1. It has a high upfront cost. The wind turbines and other equipment required to harness wind energy and generate electricity don't come cheap. These massive structures are expensive.
