

Today, energy production, energy storage, and global warming are all common topics of discussion in society and hot research topics concerning the environment and economy [1]. However, the battery energy storage system (BESS), with the right conditions, will allow for a significant shift of power and transport to free or less greenhouse gas (GHG) emissions by ...

Using Life Cycle Assessment, we discuss the environmental impacts associated with a Compressed Air Energy Storage (CAES) system as a means of balancing the electricity output of an offshore wind farm with a capacity of 400 MW. We model both conventional CAES and adiabatic CAES (ACAES), with target for baseload production of respectively 200 MW and ...

Cost-effective transition pathways to keep global temperature rise below 2°C require billions of tons of CO₂ removal from the atmosphere annually. Direct air capture (DAC) offers advantages like permanent storage of CO₂ with low land use but it is energy-intensive. Thus, sustainable and cost-effective large-scale DAC deployment needs optimal site ...

Direct air carbon capture and storage (DACCS) is an emerging carbon dioxide removal technology, which has the potential to remove large amounts of CO₂ from the atmosphere. We present a comprehensive life cycle assessment of different DACCS systems with low-carbon electricity and heat sources required for the CO₂ capture process, both stand-alone and grid ...

Hence, an environmental impact assessment is conducted to address SDG 13 and promote renewables under SDG 7. The study compares the environmental emissions of storing 1 kWh of energy for three different energy storage systems: Compressed air energy storage, vanadium redox flow batteries, and molten salt thermal storage.

Integrated socio-economic and techno-environmental assessment of PHES sites using a probabilistic spatial decision-making approach [22] For low-head PHES, a reversible, variable-speed, contra-rotating pump turbine is designed ... Compressed air energy storage is a method of energy storage, which uses energy as its basic principles. The stored ...

Direct air capture is a promising neg. emission technol., but energy and material demands lead to trade-offs with indirect emissions and other environmental impacts. Here, we show by life-cycle assessment that the com. direct air capture plants in Hinwil and Hellisheiði operated by Climeworks can already achieve neg. emissions today, with ...

A process-based life cycle assessment (LCA) model was employed to model the potential environmental

impacts of several compressed air energy storage systems. Similar to the LCA of fossil fuel power plants (e.g. Ref. [21]), a cradle-to-gate life cycle approach was adopted, and the functional unit of analysis was defined as 1 kWh of electricity ...

As the world's demand for sustainable and reliable energy source intensifies, the need for efficient energy storage systems has become increasingly critical to ensuring a reliable energy supply, especially given the intermittent nature of renewable sources. There exist several energy storage methods, and this paper reviews and addresses their growing ...

Energy storage systems have a critical part in enabling greater use of intermittent energy resources. For a sustainable energy supply mix, compressed air energy storage systems offer several advantages through the integration of practical and flexible types of equipment in the overall energy system. The primary advantage of these systems is the management of the ...

Compressed air energy storage (CAES) systems use electricity to pressurize and store air and then expand the air later to produce electricity at times in need of the generation. Combining wind power with CAES has been investigated as a way to meet baseload electricity demand [13] or even provide constant power [14] .

This paper discusses the potential environmental impacts associated with the use of a Compressed Air Energy Storage (CAES) as a means of stabilizing the electricity output of a wind farm with a capacity of 150 MW. An integrated hybrid life cycle assessment model was employed to model the potential environmental impacts of several compressed air energy ...

Compressed air energy storage (CAES) is one of the important means to solve the instability of power generation in renewable energy systems. To further improve the output power of the CAES system and the stability of the double-chamber liquid piston expansion module (LPEM) a new CAES coupled with liquid piston energy storage and release (LPSR-CAES) is proposed.

Study on chilled energy storage of air-conditioning system with energy saving. Energy Build., 79 (2014), pp. 41-46. [View PDF](#) [View article](#) [View in Scopus](#) [Google Scholar ...](#) Energy, exergy, economic and environmental assessment of using different passive condenser designs of solar distiller. Process Saf. Environ. Prot., 148 (2021), pp. 302-312.

Wind speed fluctuation at wind farms leads to intermittent and unstable power generation with diverse amplitudes and frequencies. Compressed air energy storage (CAES) is an energy storage technology which not only copes with the stochastic power output of wind farms, but it also assists in peak shaving and provision of other ancillary grid services.

1.4 Scope of Environmental Assessment This Environmental Assessment (EA) presents information on the potential impacts associated with DOE guaranteeing a loan to the Applicant and covers the construction and

operation of the completed Project. DOE has prepared this EA to comply with NEPA, Council on Environmental Quality (CEQ) regulations

A process-based life cycle assessment (LCA) model was employed to model the potential environmental impacts of several compressed air energy storage systems. Similar to the LCA of fossil fuel power plants (e.g. Ref. [21]), a cradle-to-gate life cycle approach was adopted, and the functional unit of analysis was defined as 1 kWh of electricity ...

China is currently in the early stage of commercializing energy storage. As of 2017, the cumulative installed capacity of energy storage in China was 28.9 GW [5], accounting for only 1.6% of the total power generating capacity (1777 GW [6]), which is still far below the goal set by the State Grid of China (i.e., 4%-5% by 2020) [7]. Among them, Pumped Hydro Energy ...

There are rising opportunities and prospects for integration of a large-scale energy storage system in the electric power system to mitigate the challenges arising from wide-spread growth in variable and uncertain sources of renewable energy generation. Compressed air energy storage (CAES) is one of the promising large-scale energy storage ...

Skip to search form Skip to main content Skip to account menu. Semantic Scholar's Logo. Search 221,940,367 papers from all fields of science ...

Compressed air energy storage (CAES), owing to low geographical limitation, high reliability, and negligible environmental impact, has attracted attention in recent years, hybridizing with different types of renewable energies. ... Energy, exergy, economic, and environmental (4E) assessments, along with a case study for San Diego, US ...

We provide a comprehensive life cycle assessment of different direct air carbon capture and storage configurations to evaluate the environmental performance of this potentially decisive technology in future low-carbon energy systems.

The random nature of wind energy is an important reason for the low energy utilization rate of wind farms. The use of a compressed air energy storage system (CAES) can help reduce the random characteristics of wind power generation while also increasing the utilization rate of wind energy. However, the unreasonable capacity allocation of the CAES ...

The energy industry has a significant impact on the scarce fossil hydrocarbon resources and on the environment. The burning of natural energy carriers by traditional energy facilities is one of the factors increasing the content of greenhouse gases in the atmosphere that entails serious climate changes. Evaluating

Air energy storage environmental assessment

the efficiency of energy enterprises and the ...
