

Benefits of renewable energy in the caribbean

Using a macro-econometric approach, Renewable Energy Benefits: Measuring the Economics takes into account the linkages between the energy system and the world's economies within a single quantitative framework. The analysis compares a business-as-usual case to two cases of advanced renewable energy deployment.

in their energy mix, Caribbean countries have an opportunity to also increase their energy resilience and security. 4

So, imagine all the benefits of solar and wind (e.g., clean, cheap energy), but without the disadvantage of intermittent power. This makes tidal energy an attractive renewable energy source to pursue. Disadvantages of tidal energy. As tidal energy is still in its developmental infancy, cost is a massive strike against this type of renewable energy.

Despite this obvious potential of renewable energy resources available to the Region, a recent report prepared by the Caribbean Centre for Renewable Energy and Energy Efficiency suggests that renewable energy penetration in our Region is still quite low relative to the global average. Recent estimates suggest that renewable energy penetration ...

However, the deployment of resilient energy solutions remains a complex endeavor across the region, both financially and logistically. Despite the presence of abundant renewable energy resources, most Caribbean islands rely heavily on imported fossil fuels, making their economies vulnerable to price shocks. Limited regulatory capacity and ...

Population growth and advances in quality of life in Latin America and the Caribbean (LAC) will require the region to rapidly increase its energy supply, even if major improvements in energy efficiency are attained. The region is characterized by a low-carbon power matrix and a potential to produce over 78 PWh from non-traditional renewable energy technologies (NRETs).

Sustainable Energy in the Caribbean is supporting CARIFORUM countries within the wider Caribbean EU partnerships. According to IRENA, the global energy transition has also stimulated widespread socio-economic benefits, through the adoption of some form of renewable energy technology in 164 countries as at mid-2015, with as many as 7.7 million jobs already created from EE and RE activities as of 2015.

Renewable energy comes from unlimited, naturally replenished resources, such as the sun, tides, and wind. Renewable energy can be used for electricity generation, space and water heating and cooling, and transportation. Non-renewable energy, in contrast, comes from finite sources, such as coal, natural gas, and oil.

Growth in renewable energy jobs IRENA's Renewable Energy and Jobs - Annual Review undertakes yearly estimates of global employment in the sector since 2013 The 2017 edition concludes that direct and indirect renewable energy employment has expanded to 8.3 million people worldwide. In addition, there are an estimated 1.5 million

24 million people working in the renewable energy sector. This report provides the latest evidence that mitigating climate change through the deployment of renewable energy and achieving other socio-economic objectives are mutually beneficial. Thanks to the growing business case for renewable energy, an investment in one is an investment in both.
