

Charger power systems battery charger manual

What is a battery charge control?

The control is used in ferro-resonant taper chargers to provide fully automatic battery charging. The charging profile, or algorithm, uniquely monitors the output current and voltage to optimally charge the battery, based on battery manufacturer's recommendations. The standard charging profile for flooded lead-acid batteries has 2 phases.

How do I document my Charger settings?

Document any configuration or settings changes that are made by marking the ratings label on your charger or on an additional label or tag attached to your charger. **SAVE THIS MANUAL:** Keep it in a location where it is available to anyone who may operate the charger. 15 of the FCC Rules.

How do you charge a battery pack?

120 volts, AC only, 60 Hz. Connect the charger to a power supply. Attach the battery pack to the charger by aligning the raised ribs on the battery pack with the grooves in the charger, then slide the battery pack into the charger. Press down on the battery pack to be sure contacts on the battery pack engage properly with contacts in the charger.

What is an E-series battery charger?

INTRODUCTION This E-Series battery charger is an advanced, microprocessor-based, silicon-controlled rectifier (SCR) charger designed to optimize both daily battery capacity and overall battery life. It plugs directly into standard 120V, 15A, 60 Hz AC outlets/receptacles for use in off-board (shelf) or on-board (built-in) applications.

What are the features of a battery charger?

Automatic shut-down if battery starts to overheat. Automatically resumes charge after a power failure during the charge cycle. Displays charging amps, battery volts/cell, full battery voltage, amp-hours returned, and run time. Delayed start adjustable from 1 minute to 24 hours. Delayed start until a certain time-of-day.

How many volts should a battery charger be connected to?

This charger must be connected to a single-phase nominal 120 Vac, 60 Hz AC power source with a voltage of 110 Vac to 132 Vac (charge times increase at lower AC voltages). The frequency must be 57 Hz to 63 Hz. Circuit breaker or fuse protection for the AC outlet to which the charger is connected should allow 15A per charger.
