Commercial solar power systems design

These systems generate the same quality of alternating current (AC) electricity as is provided by your utility. The energy generated by a grid-connected system is used first to power the AC electrical needs of the home or business. Any surplus power that is generated is fed or "pushed" onto the electric utility's transmission grid.

With solar systems having a design life of up to 25 years, businesses can now have more accurate model of their costs of electricity. For most businesses, the cost per kW for solar power will be below the current price of the standard grid rate. We provide Solar Energy Solutions for commercial and Industrial clients.
