Compressed air energy storage drive

The usage of compressed air energy storage (CAES) dates back to the 1970s. The primary function of such systems is to provide a short-term power backup and balance the utility grid output. [2]. At present, there are only two active compressed air storage plants. The first compressed air energy storage facility was built in Huntorf, Germany.

Compressed air energy storage systems may be efficient in storing unused energy, but large-scale applications have greater heat losses because the compression of air creates heat, meaning expansion is used to ensure the ...
