The reason is that the same absolute amount of renewable energy yields a higher renewable energy share, if energy demand growth is diminished because of energy efficiency. As for energy intensity, the annual gain has jumped from an average of 1.3% between 1990 and 2010 to 2.2% for the period 2014-2016, whole falling to 1.7% in 2017 [12].

Addressing climate pressures should be the main reason a company adopts a renewable energy strategy. However, managing exposure to long-term energy costs and short-term legal risks are both benefits that better align with corporate decision-making. As a recent Forbes article suggests, "Greenwashing is the new goldmine for litigators."

The energy sector is responsible for approximately 75 percent of global carbon emissions, according to some estimates. Despite great advancements in energy efficiency and impressive growth in the renewable energy

Corporate renewable energy strategy

sector, global emissions continue to rise year after year as our appetite for energy grows, something that is not projected to slow down.

Large companies spend millions, or billions, of dollars directly on energy each year--and millions more indirectly, on supply chain, outsourcing, and logistics costs. Yet outside the most energy-intensive industries, the majority of firms approach energy as merely a cost to be managed. This is a strategic mistake that overlooks enormous opportunities to reduce risk, ...
