There is an urgent need to develop stable and high-energy storage dielectric ceramics; therefore, in this study, the energy storage performance of $\text{Na}_{0.5-x}\text{Bi}_{0.46-x}\text{Sr}_{2x}\text{La}_{0.04}(\text{Ti}_{0.96}\text{Nb}_{0.04})\text{O}_{3.02}$ ($x = 0.025-0.150$) ceramics prepared via the viscous polymer process was investigated for energy storage. It was found that with increasing Sr^{2+} content, the material ...

Feng et al. introduced the primary physical mechanisms about polarization, breakdown, and energy storage of multilayer structure dielectric, systematically summarized the theoretical simulation and experimental results, and described the synthesis approaches and design concepts about multilayer structure dielectrics.

High-performance dielectric energy-storage ceramics are beneficial for electrostatic capacitors used in various electronic systems. However, the trade-off between reversible polarizability and breakdown strength poses a significant challenge in simultaneously achieving high energy density and efficiency. Here a strategy is presented to address ...
