

Don't waste money on solar panels do this instead

Solar panels can save you money on your electricity bills, and they typically pay for themselves in 10 years or less. Solar panels can even increase home value by an average of 6.8%! Solar panels are best for people who live in good solar states with solar-friendly policies, like net metering and solar incentive programs.

Nowadays, 95% of value in materials can be recycled - but solar panel recycling needs to be scaled up. Recent projections indicate recyclable materials from solar panels will be worth more than \$2.7 billion by 2030. Unlike many consumer electronics, solar panels have a long lifespan that extends 20 to 30 years.
