Despite the availability of alternative technologies like "Plug-in Hybrid Electric Vehicles" (PHEVs) and fuel cells, pure EVs offer the highest levels of efficiency and power production (Pillay et al., 2021). PHEV is a hybrid EV that has a larger battery capacity, and it can be driven miles away using only electric energy (Ahmad et al., 2014a, 2014b).

Electric vehicles are a significant step toward reducing carbon footprints. They produce no tailpipe emissions and, when powered by renewable energy, can be virtually carbon-neutral. Additionally, EVs are more energy-efficient than their gasoline counterparts. They can convert a larger portion of the electrical energy from the grid to power at the wheels.
