electrical consumption. 4p/kWh credit also applies at any other time of day on any other British Gas electricity tariff if your EV is left plugged in for 6 hours or more.

Most people are familiar with these developments, but fewer are aware that electric cars can help to stabilize the power grid by acting as temporary energy storage facilities. Over the past ten years, more than 50 pilot projects of different sizes involving bidirectional charging have been successfully completed in locations all over the world.

Electric vehicles are beginning to win considerable attention but are still rarely sighted on American roads. Through the first half of 2017, fewer than 800,000 battery EVs (BEVs) had been sold in the United States, or about 1 percent of all cars. <sup>1</sup> But growth has been strong of late due to rising consumer acceptance, improved technology, and supportive regulation.

<sup>3</sup> Electric cars are generally much cheaper to run than petrol or diesel cars - and by far the biggest savings you can make will come from the fuel. This guide is all about EV tariffs for charging your EV at home, yet there are 10,000s of public electric car charging points if you need to top-up when you're out and about.

Thermal stores are highly insulated water tanks that can store heat as hot water for several hours. They usually serve two or more functions: Provide hot water, just like a hot water cylinder. Store heat from a solar thermal system or biomass boiler, for providing heating later in the day.; Act as a "buffer" for heat pumps to meet extra hot water demand.

<sup>5</sup> Electric transport has moved on from being a niche for enthusiasts, to a huge, highly successful business. Recycling vehicle batteries is still relatively small fry, but it will become a pressing need in the next couple of years. Electric car sales are all about batteries, but there are more ways to store energy than electro-chemically.

Install energy storage capable of storing excess energy that is properly controlled and coordinated with the utility and allows integration of more distributed energy resources. ES-02 Install energy storage that provides grid services to Hawaiian Electric, such as operating reserves, ramp smoothing, frequency control, and voltage control.

Electric cars with bi-directional charging capability, also known as vehicle-to-grid (VTG) or vehicle to home (VTH) charging, can supply power back to the grid, or power a home, using energy from the EV battery. It essentially allows your EV to function as a home battery, storing energy and then releasing that energy when

it's needed.

For the vehicle the battery capacity is low, but it can be a highly valuable energy reserve both locally and even internationally by helping balance the grid. V2H: Vehicle-to-Home The EV battery also has the potential to be a mobile storage device. Most cars are used for the daily commute between home and office, but 90% of the time they are ...

You can use the size of your battery to estimate the electricity required to "fill the tank" for your EV. Electric vehicle batteries have relatively large capacities and store between 25 and 100+ kWh. For reference, home energy storage systems, such as the Enphase Energy IQ and the Tesla Powerwall+, store around 13.5 kWh of electricity.
