Applied Technical Services offers a broad spectrum of electrical and electronic product testing. We frequently inspect common products such as insulators, batteries, cables, wires, lights, connectors, circuit breakers, and other electronic components, determining the causes of electrical failures and affirming the soundness of working products.

The visuals are engaging and the efficiency of being able to show relationships between voltages, currents, and resistances in series and parallel connections is remarkable. I didn't know, Samir, the founder of DCACLab, prior to using the simulator, but when I contacted him about certain features in the Lab, he was and has been very supportive.

Electric Lab services both our BMW and Chrysler Town & Country. We regard them as our dealer service center since they perform all factory warranty work efficiently, economically (especially, in comparison to the actual dealers) and most importantly - with complete trust.
