What is on-site battery energy storage?

On-site battery energy storage systems, or 'behind-the-meter BESS', could be the solution that empowers your business to improve its on-site energy productivity and unlock potential revenue from market revenue streams and meet its Environmental, Social and Governance (ESG) commitments.

Is energy storage a superhero?

The renewable energy industry continues to view energy storage as the superhero that will save it from its greatest problem--intermittent energy production and the resulting grid reliability issues that such intermittent generation engenders. Energy storage can play the superhero role because it has features of both generation and transmission.

What is shell energy's Bess solution?

With Shell Energy's BESS solution, you are boosting your business' bottom line while helping provide grid stability in Australia's energy transition, one battery at a time. The best part of Shell Energy's BESS Solution is that we really do it all.

What are the operational limitations of energy storage?

Operating Limitations: Energy storage resources may be subject to operational constraints that do not affect traditional generation projects. For example, certain battery technologies will degrade more quickly if the state of charge is not actively managed within a certain range.

How does energy storage work?

Energy storage also converts energy from one medium to another--whether it be mechanical energy in a pumped hydro facility or chemical energy in a battery--so that energy can be provided when it is needed by the grid.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

When managed optimally, the benefits of BESS and solar, as offered by Shell Energy, include: Lowering energy consumption and spend by utilising stored excess solar to avoid drawing energy from the grid during peak periods; Unlocking the opportunity to create additional revenue through participation in Demand Response programs
