

One fundamental challenge in the adoption of PCM-based TES is that there is limited tunability in the usage temperature. Unlike an electrochemical energy storage device where the voltage is fixed, as with a Li-ion battery, the variation in ambient temperature means that the thermal voltage (i.e., the temperature) is not fixed for the near-ambient applications ...

An actual practical energy storage battery pack (8.8 kWh, consisting of 32 single prismatic cells with aluminum packages) was used as the test sample, as shown in Fig. 1 (a).
