How do you protect a battery compartment?

A radiant energy detector and an automatic sprinkler system are required to protect the compartment [52]. Lithium-ion batteries and cells must be kept at least 3 m from the exits of the space they are kept in [52].

Fig. 4 shows the schematic diagram of the air cooling of the energy storage battery thermal management system. The containerized storage battery compartment is separated by a bulkhead to form two small battery compartments with a completely symmetrical arrangement. The air-cooling principle inside the two battery compartments is exactly the same.
