

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments, direct mechanisms, such as subsidies and rebates, will be effective. For applications dependent on price arbitrage, the existence and access to variable market prices are essential.

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

Is it profitable to provide energy-storage solutions to commercial customers?

The model shows that it is already profitable to provide energy-storage solutions to a subset of commercial customers in each of the four most important applications--demand-charge management, grid-scale renewable power, small-scale solar-plus storage, and frequency regulation.

How much does BNEF expect to spend on energy storage?

BNEF expects annual expenditures in this sector will increase 3.5 times, from \$8.6 billion in 2020 to \$30.1 billion in 2030. Figure 5. Global projected grid-related annual deployments by application (2015-2030) Source: Bloomberg New Energy Finance, "2019 Long-Term Energy Storage Outlook," BloombergNEF, New York, 2019.

What is the growth rate of industrial energy storage?

Global industrial energy storage is projected to grow 2.6 times, from just over 60 GWh to 167 GWh in 2030. The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8.

The gross profit margin increased from 19% in 2020 to 22% in 2022. The operating and net profit margins have also improved, with operating profit margin rising from 10% in 2020 to 14% in 2022. Comparison of Profitability Ratios with Industry Averages When comparing GPP's profitability ratios with industry averages, the company's gross ...
