What are the different types of chemical energy storage batteries?

The document discusses various types of chemical energy storage batteries. It begins by defining batteries as devices that convert chemical energy to electrical energy through electrochemical reactions. Batteries are then classified as either primary (non-rechargeable) or secondary (rechargeable) batteries.

What is a pumped storage hydroelectric power plant?

A pumped storage hydroelectric power plant stores electricity by pumping water during off-peak times. In such a plant, the stored water can be utilized to generate electricity. The hydroelectric power plant can store electricity in Megawatts (MW) or even Gigawatts (GW). The potential and kinetic energy of the stored water is then converted into electric energy.
