Energy storage ceramic dielectrics usually include linear dielectric, ferroelectric and antiferroelectric [12]. The AFE dielectrics reveal a phase transition from ferroelectric (FE) with a large maximum polarization (P_{max}) to antiferroelectric (AFE) with a small remnant polarization (P_r) [4], [13] consequently, they show a preeminent energy density due to their large DP ($P \dots$

Energy storage in dielectrics is realized via dielectric polarization P in an external electric field E , with the energy density U_e determined by $\int P_r P_m E dP$, where P_m and P_r are the maximum polarization in the charging process and remnant polarization in the discharging process, respectively (fig. S1) (). P_r manifests itself as the P-E hysteresis, which ...
