Should energy policy reflect the technical capabilities of different asset types?

In fact, the response time of a BESS (in sub-seconds) is much faster than that of a conventional power plant (typically 3-5 seconds). Therefore, energy policy should reflect the technical capabilities of various asset types including BESS for use in frequency regulation. Policy recommendations.

How can energy storage be acquired?

There are various business models through which energy storage for the grid can be acquired as shown in Table 2.1. According to Abbas, A. et. al., these business models include service-contracting without owning the storage system to "outright purchase of the BESS.

What are the different types of energy storage systems?
