170+ Countries SUNGROW focuses on integrated energy storage system solutions, including PCS, lithium-ion batteries and energy management system. These "turnkey" ESS solutions can be designed to meet the demanding requirements for residential, C& I and utility-side applications alike, committed to making the power interconnected reliably.

The power conditioning system (PCS) only makes up a small portion of the overall costs for lithium-ion and lead-acid battery-based storage systems, as shown in Figure 1. However, the PCS's share of costs will increase due to the falling prices of battery cells, as shown in Figure 2.

Energy storage improves resilience and reliability Energy storage can provide backup power during disruptions. The same concept that applies to backup power for an individual device (e.g., a smoke alarm that plugs into a home but also has battery backup), can be scaled up to an entire building or even the grid at large.
