What is the power reserve of ETA 2836-2?

As of 2021, the official ETA website claims that this movement has a typical power reserve of 42 hours. The ETA 2836-2 is popular among high-end luxury watches. Getting this movement from ETA is almost impossible as these movements are created and shipped to major watchmakers.

What is the difference between ETA 2836-2 and ETA 2824-2?

Both movements are very similar as the ETA 2836-2 is an advancement of the ETA 2824-2. The two movements have a similar diameter of 25.6mm. The main difference between these two movements is that 2836 holds a day-date calendar complication while 2824 houses only the date complication.

What is the ETA caliber 2836-2?

The ETA caliber 2836-2 is a Swiss made automatic movement with 25 jewels. This movement is part of ETA's Mecaline collection. The caliber 2836-2 is based on the ETA caliber 2824-2 with the main difference being that the 2836 has a day-date calendar complication and the 2824 is date only. There is also a similar caliber 2834-2.

How many hours does the ETA 2836-2 take?

It takes a minimum of 27 winds of the crown to wind the ETA 2836-2 fully; converting that to hours would take a total of 38 hours. As of 2021, the official ETA website claims that this movement has a typical power reserve of 42 hours. The ETA 2836-2 is popular among high-end luxury watches.

Is Eta 2836-2 a good watch?

The ETA 2836-2 is popular among high-end luxury watches. Getting this movement from ETA is almost impossible as these movements are created and shipped to major watchmakers. However, if you want to replace a damaged part, you can get other replacements, just not from ETA. Some such watches are the Swiss Legend Abyssos dive watch.

How does the ETA 2824-2 date complication work?

The region of the date complication depends on where the window groove is located. The ETA 2824-2 is equipped with an Etachron regulator that assists the movement to attain a beat frequency of 28,800 vibrations per hour. The Swiss caliber utilizes a ball bearing rotor which allows the movement to rotate bidirectionally.

My Aquadive BS-100 diver uses a &quot;top grade&quot; ETA 2836-2 movement tuned in-house to COSC accuracy and isochronism standards. It is my understanding that the 2836-2 movement is essentially the same as the 2824-2 except for: 1) the additional complication for Day in addition to Date; and 2) the date changes instantly at midnight instead of gradually rolling ...

Functions of ETA 2836-2. The ETA 2836-2 is an automatic movement, which means it self-winds through the wearer's motion. This mechanism is facilitated by a rotor that responds to wrist movement and transfers energy to the movement. This eliminates the need for manual winding, making watch-wearing and upkeep more convenient.

The ETA 2836-2 also has a day and date, but both of these are displayed in a row at 3 o'clock. Due to the rather limited space, the days are abbreviated. ... Well, the higher the frequency, the more energy the watch uses. In addition to a modified barrel and an escapement regulated by screws on the balance wheel, this reduction in frequency ...

The movement, I believe, is an ETA 2836-2. I've had the watch for 3 days, and have been wearing it each day. So far it seems to be running at a very consistent +12seconds per day. I can't seem to find specs listed online, indicating whether this is within expected limits for this watch and/or movement - so I was hoping someone could tell me. ...
