The stretch-shortening cycle. Stretch-shortening cycle (SSC) refers to a muscle action where an active muscle stretch is immediately followed by an active muscle shortening. Thus, producing far more force than a regular contraction (e.g. a countermovement jump versus a squat jump). The stretch-shortening cycle consists of three phases; the eccentric phase, the ...

The failure rate of devices is dependent on the amount of radiation that the part is exposed to and is an important factor in not just space-based, but also ground-based power converter designs. In this article, based on a whitepaper by Littelfuse, we discuss the key factors that affect failure rates of cosmic devices due to cosmic radiation.

Obviously, the price and the power is important, but so are things like the user's needs and security.
