

abstract = "A flywheel energy storage (FES) system is an electricity storage technology under the category of mechanical energy storage (MES) systems that is most appropriate for small- and medium-scale uses and shorter period applications. In an FES system, the surplus electricity is stored in a high rotational velocity disk-shaped flywheel.

The cost invested in the storage of energy can be levied off in many ways such as (1) by charging consumers for energy consumed; (2) increased profit from more energy produced; (3) income increased by improved assistance; (4) reduced charge of demand; (5) control over losses, and (6) more revenue to be collected from renewable sources of energy ...

Abstract: Finding efficient and satisfactory energy storage systems (ESSs) is one of the main concerns in the industry. Flywheel energy storage system (FESS) is one of the most satisfactory energy storage which has lots of advantages such as high efficiency, long lifetime, scalability, high power density, fast dynamic, deep charging, and discharging capability.

Pumped hydro energy storage (PHES) [16], thermal energy storage systems (TESS) [17], hydrogen energy storage system [18], battery energy storage system (BESS) [10, 19], super capacitors (SCs) [20], and flywheel energy storage system (FESS) [21] are considered the main parameters of the storage systems. PHES is limited by the environment, as it ...
