

1 Introduction. With the global environmental pollution and energy crisis, renewable energy such as photovoltaic (PV) [1-3] and wind power generation (WPG) [4, 5] is playing a more and more important role in energy production. However, the output power of PV and WPG are usually fluctuating because of the intermittence and randomness of solar and ...

Decline of geomagnetic and ionospheric activity at earthquake during spotless Sun. Author links open overlay panel T.L. Gulyaeva. Show more ... lithosphere can generate a considerable vertical electric field between the ground and the ionosphere with the seismic energy propagation to the upper atmosphere and ionosphere (Pulinets and Davidenko ...

12/12/2023 - 09:15 AM . New York, Dec. 12, 2023 (GLOBE NEWSWIRE) -- PHI Group, Inc. (n/k/a Philux Global Group Inc., PHIL), is pleased to announce that the Company has signed an Agreement for Comprehensive Cooperation with Eng. Dat Minh Doan, a geomagnetic and quantum physics expert to jointly cooperate in applying Mr. Doan's ...

Dementia affects 55 million people worldwide and over 60 % of those with dementia reside in low- and middle-income nations (Prince et al., 2014, World Health Organization., 2023). Due to global increases in average life expectancy, the population of elderly people (>60 years of age) is expected to increase by 56 % in 2030 relative to 2015 and nearly ...

New York, June 25, 2024 (GLOBE NEWSWIRE) -- PHI Group, Inc. (n/k/a Philux Global Group Inc., PHIL), is pleased to announce that a Provisional Patent Application has been filed with the United States Patent and Trademark Office, Application Number #63/655,846; Docket # 24RMA07, for a new and useful invention entitled "MULTI-IMPULSE ...

With data provided by magnetic observatories, geophysicists can gain insights into our planet's interior and nearby space environment without even leaving the ground. This introduction to geomagnetism is from "Magnetic monitoring of earth and space" (PDF) by Jeffrey Love, published in Physics Today 61, 2, 31 (2008). (Note that figure 3 of this version and the downloadable PDF ...

Earth is one of the inner planets of the Solar System, but - unlike the others - it has an oxidising atmosphere, relatively stable temperature, and a constant geomagnetic field (GMF). The GMF does not only protect life on Earth against the solar wind and cosmic rays, but it also shields the atmosphere itself, thus creating relatively stable environmental conditions. ...

PHI Group, Inc. Announces Filing of Provisional Patent Application for Multi-Impulse Geomagnetic Energy Aiming to Provide Superior Solutions to Improve Energy Efficiency, Reduce Greenhouse Gas Emissions and

Fight Climate Change. ... wind, energy storage batteries, and even energy from consumer systems, such as central air conditioning systems ...

1 INTRODUCTION. Various energetic phenomena on the Sun result in short- and long-term fluctuations in our geospace (Schwenn 2006; Baker 2009). One of these fluctuations is geomagnetic storms, which are short-term disturbances in the Earth's magnetic field (Dessler, Francis & Parker 1960; Gonzalez et al. 1994). Geomagnetic storm intensity is ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power generation from wind and solar resources is a key strategy for decarbonizing electricity. Storage enables electricity systems to remain in... [Read more](#)

Space debris is increasingly problematic and needs active removal, especially in low Earth orbits (LEO). Paying for the vast cost of the disposal of debris from the situation is still inevitable even though pivotal technical hurdles have been overcome with the growing maturity of capturing and deorbiting methods. To this end, a novel geomagnetic energy (GME) propellant ...

1. Introduction. Since the Soviet Union launched the first satellite in 1950s, space debris increases rapidly in the low Earth orbit (LEO) with the increasing frequent space activities of human beings [1, 2]. The scenario of the high density of debris is such that collisions between debris increase not only the debris population but also the probability of further collisions, ...

An energy system, geomagnetic technology, applied in the direction of magnets, magnetic objects, space vehicle docking devices, etc., can solve problems such as increasing difficulty and uncertainty ... Therefore, the deorbiting method of low-orbit space debris using geomagnetic energy storage can effectively solve this problem.

Geomagnetic storm leads to a decline in the left ventricular contr ... [Effect of geomagnetic storms on the state of heart mitochondria and their role in providing energy for myocardial contraction] *Biull Eksp Biol Med.* 1986 May;101(5):546-8. [Article in Russian] Authors V ...

The embodiment of the invention discloses a low-orbit geomagnetic energy storage-release delivery system, which comprises a control system, a three-axis control moment canceller and an energy system, wherein the control system, the three-axis control moment canceller and the energy system are arranged on a delivery parent spacecraft, and the delivery parent spacecraft ...

The invention relates to the field of geomagnetic energy storage on-orbit delivery, and discloses a method for inhibiting nutation of a spacecraft, which is used for low-orbit geomagnetic energy storage on-orbit delivery, and comprises the following steps: s1, the delivery connecting rod is connected with two mass blocks in a sliding way along the length direction, and the mass ...

Geomagnetic energy storage decline

Geomagnetic storms are large-scale disturbances in the Earth's magnetic field due to orders of magnitude increases in trapped energetic $\sim 10\text{-}300$ keV particle fluxes in the magnetosphere. During geomagnetic storms, the horizontal component of the low-latitude magnetic fields is significantly depressed over a time span of one to a few hours from the ...
