LONGi High-efficiency solar Module, widely adopting PERC solar cells technology, Half-cut Module Technology and Bifacial PV technology, Mono Silicon Crystalline Technology has become a leading manufacturer and brand in the export and installation of monocrystalline silicon solar photovoltaic module.

While the overall technical design of a standard c-Si photovoltaic module is quite similar from one manufacturer to the other, there are certainly ways that manufacturers are adding features to gain an edge over the competition, such as half-cut solar cells. In this article, we look into the technical features, advantages, and possible disadvantages of solar PV modules with ...

Half-cell solar modules have solar cells that are cut in half, which improves the Solar Module's performance and durability. Traditional 60-cell and 72-cell Solar Panels will have 120 half-cut cells and 144 half-cut cells, respectively. When solar cells are halved, their current is also halved, so resistive losses are lowered and the solar cells can produce more power.

Longi Solar 360w Mono Solar Panel - LR4-60HPH-360M: LONGi, 360w Mono PERC w 120 Half-cut Cells (60 cell equivalent), Black frame, white backsheet and MC4 connectors w/ 1200mm cable, LR4-60HPH-360M. Less components and lower cost. Excellent performance under the IEC and UL Standard for 1500V system voltage brings lower system side cost.

Traditional full-cell panels are made with 60/72 cells on the entire panel. In a half-cell or half-cut module, the number of cells on the entire panel is doubled into 120 or 144 cells per panel. The panel is however the same size as a full-cell panel but with double the number of cells. The goal of the new technology is to lower the resistance of the panel and increase the ...
