What is grid-scale storage?

Grid-scale storage refers to technologies connected to the power grid that can store energy and then supply it back to the grid at a more advantageous time - for example, at night, when no solar power is available, or during a weather event that disrupts electricity generation.

Does storage add value to the grid?

They found storage adds the most value to the grid and deployment increases when the power system allows storage to simultaneously provide multiple grid services and when there is greater solar photovoltaic (PV) penetration.

Why is grid-scale battery storage important?

Grid-scale storage, particularly batteries, will be essential to manage the impact on the power grid and handle the hourly and seasonal variations in renewable electricity output while keeping grids stable and reliable in the face of growing demand. Grid-scale battery storage needs to grow significantly to get on track with the Net Zero Scenario.

What is the \$119 million investment in grid scale energy storage?

With the \$119 million investment in grid scale energy storage included in the President's FY 2022 Budget Request for the Office of Electricity, we'll work to develop and demonstrate new technologies, while addressing issues around planning, sizing, placement, valuation, and societal and environmental impacts.

What could drive future grid-scale storage deployment?

By 2050, annual deployment ranges from 7 to 77 gigawatts. To understand what could drive future grid-scale storage deployment, NREL modeled the techno-economic potential of storage when it is allowed to independently provide three grid services: capacity, energy time-shifting, and operating reserves.

Why do we need solar and wind energy storage?

Demand for power is constantly fluctuating. As a result, it's not uncommon to have periods of time when conditions for solar and wind energy generation allow us to draw far more power from these natural sources than the grid demands in that moment. But with ample storage, we don't have to let any of it go to waste.
