

If it is 25% thinner, its expansion force and interface circulation will be better. Cooling is simpler, whether it is 5C or 6C, it can be achieved with only upper and lower water-cooling plates. The way the poles come out on both sides is more suitable for C2C design. The water-cooling plate can be placed on top and used as a lower floor.

They found that the annular fin unit reduced PCM ...

Mg-based metal hydrides have important applications in the thermochemical energy storage systems of solar power plants by forming metal hydride pairs, in which high-temperature metal hydride (HTMH) reactors work as heat storage media and low-temperature metal hydride (LTMH) reactors serve as hydrogen storage media [181].

Liquid cooling systems have higher heat transfer efficiency due to the higher thermal conductivity of liquids compared to air. Liquid cooling can directly immerse the battery in a liquid with high thermal conductivity and insulation for heat exchange [18, 19], or indirectly perform heat exchange with the battery through a cooling plate [20, 21].
