If you don't happen to like a picture it finds you can manually select your own image by long-pressing on the song title (or on the album cover area in the player screen) and choosing "Album Art". I'm trying to figure out how to add album art manually at the CD-rip stage using dbpowerAMP reference (registered). If the AMG & freedb databases don't have the album art, but I find it elsewhere and download it, I can't figure out how to add it to the metadata being written to the files as the CD rips.

Thanks for the reply, I tried switching from light, to dark, to default but i'm not seeing an option for alternative layout, also the player ui does not seem to have what i am looking for (album art animation, chromecast button, rating type, hide menu button, animate long labels, show track counter, button resets track, -10/+10 rewind, navigate to folder, restore defaults. If you're ripping to FLAC or ALAC then dBpoweramp will save the album art images as a tag in each file. dBpoweramp will also save the album art as a folder.jpg file in the folder that the files are ripped to. The default settings for dBpoweramp ripper are to resize the album art to 800x800 pixels.

/album\_art/ Backup all of those as well. Copy and paste. No losses. /album\_art/ is how you manipulate Poweramp to show a certain artwork for the album, but not on any of the actual songs. Last I checked you had to manually put an image in here to get this feature to work. It basically makes Poweramp act the same way as it does in Folder ...
