How do solar cells generate electricity?

PV cells,or solar cells,generate electricity by absorbing sunlightand using the light energy to create an electrical current. The process of how PV cells work can be broken down into three basic steps: first,a PV cell absorbs light and knocks electrons loose. Then,an electric current is created by the loose-flowing electrons.

To run home appliances or feed power back to the grid, we convert DC to AC. Key to this process are solar inverters. They change DC into AC, ready for use at 120 volts. This allows powering our daily appliances or sharing extra energy with others. how solar cell converts sunlight to electricity. Solar cells turn sunlight into electricity.

Net metering is an arrangement between solar energy system owners and utilities in which the system owners are compensated for any solar power generation that is exported to the electricity grid. The name derives from the 1990s, when the electric meter simply ran backwards when power was being exported, but it is rarely that simple today.
