

How to dispose of swollen lithium ion battery

How do you dispose of a swollen lithium battery?

Lithium batteries contain hazardous materials and even when not damaged should not be thrown in the garbage. Contact a local hazardous material disposal center or e-waste facility to find a place near you to bring the battery. Your city or local government may also have resources to dispose of them. How dangerous is it to have a swollen battery?

Should lithium-ion batteries be thrown away?

Whether they are damaged or not, lithium-ion batteries should never, ever, be thrown away. Not only is the battery the kind of environmental hazard you don't want sitting in a landfill, but even a brand new lithium-ion battery is a fire hazard if it is punctured or shorted out in the trash can or garbage truck.

How do I get rid of swollen batteries?

Luckily, with some careful handling and disposal, you can get rid of swollen batteries safely and fairly easily. Carefully remove the swollen battery and take it to an e-waste center or computer repair store for proper disposal. Take precautions when handling a swollen battery. Swollen batteries are hazardous and should be handled with care.

Why do lithium ion batteries swell?

Lithium-ion batteries use a chemical reaction to generate power. As the battery ages, this chemical reaction no longer completes perfectly, which can result in the creation of gas (called outgassing), leading to a swollen battery.

Is a lithium battery a hazardous waste?

A lithium battery is considered hazardous waste. It should not be discarded in a dumpster or in a garbage bin in your home. A swollen battery is an environmental hazard and dangerous to sanitation workers. Take the battery to a local electronic waste center. Search online for electronic waste centers in your area.

Where can I dispose of swollen batteries?

Once you've mitigated the fire risk as best as you can, look for a disposal service that accepts swollen batteries. Recycling centers may be able to dispose of swollen batteries. We suggest that you call ahead or check online to see whether your local recycling center can accept inflated batteries.

Of the common signs your battery is failing, a swollen battery is the most urgent and dangerous. Battery swelling happens due to a little thing called outgassing, which occurs when a battery gets overcharged, damaged, or simply old. Under those circumstances, the chemical reaction that keeps your battery running breaks down and, just like the name suggests, outputs gas.
