How does a hydraulic start system work?

Hydraulic starting systems store energy in the form of hydraulic oil under pressure inside a piston accumulator. The oil is released by a manually operated foot valve or a solenoid-operated start valve. Once released, the oil travels to the starter motor which engages with the engine's ring gear and starts to crank the engine.

How does a hydraulic starter motor work?

The Starter Motor Is operated by the hydraulic oil under pressure. Made of rugged cast iron Lightweight yet aluminium free Models cover a torque range from 30Nm to over 200Nm The Foot Valve Offers an economical and reliable method of controlling a hydraulic starter system.

What are the components of a powerstart hydraulic starter?

Powerstart hydraulic starters consist of an accumulator, oil reservoir, relief valve, pressure gauge, hand pump, foot valve, starter motor, and hoses and fittings. They feature a modular construction.

What are the benefits of a hydraulic starter system?

A hydraulic starter system offers several benefits, including preventing over-pressurisation of the system and preventing dirt contaminating the starting system. It also features a bypass valve to prevent element collapse when blocked. Additionally, it automatically unloads a pump without causing heat build-up and provides an economical and reliable method of controlling a hydraulic starter system.

Can a powerstart hydraulic starter be charged manually?

All Powerstart hydraulic starters can be fitted with optional beryllium copper pinions for non-sparking applications. Hydraulic starting systems can be recharged manually via an optional hand pump. This offers true "black start" capability. No other system can be manually charged.

Can a hydraulic starting system be recharged manually?

Hydraulic starting systems can be recharged manually via an optional hand pump. This offers true "black start" capability. No other system can be manually charged. Powerstart hydraulic starting systems offer nearly indefinite energy storage. Provided there are no leaks, the system can remain fully charged and ready.
