# Introduction to energy storage machine

Energy storage systems are required to adapt to the location area's environment. Self-discharge rate: Less important: The core value of large-scale energy storage is energy management, which inevitably requires energy time-shifting, time-shifting, and self-discharge rate directly affecting the efficiency. Response time: Normal

Energy Storage Systems (ESSs) play a very important role in today's world, for instance next-generation of smart grid without energy storage is the same as a computer without a hard drive [1]. Several kinds of ESSs are used in electrical system such as Pumped Hydro Storage (PHS) [2], Compressed-Air Energy Storage (CAES) [3], Battery Energy Storage (BES) ...
