How will tourism affect energy demand in archipelagos?

Tourism and population growth will continue to pressure energy demand in most archipelagos in the coming years. A roadmap is necessary to replace the importation of diesel with local renewable sources, in which PV solar stands out as the most abundant and most economically viable option.

What is the fastest growing energy source in the archipelago?

Solar power is the fastest growing energy source in the archipelago. A large portfolio of new renewable energy projects are planned [80,85]. The most remarkable is the previously mentioned Conolophus project on Santa Cruz Island (14.8 MWp and 40.9 MWh batteries).

Why did the hydropower plant in Principe Island degrade?

As the demand for electricity grew, the country ceased the development of new projects for hydropower, and increased the installation of diesel generator units. Some of the mini hydropower plants started to degrade due to lack of proper maintenance. This was the case for the plant installed on the Papagaio river of Principe Island.

A review on energy storage and demand side management solutions ...

However, the nation's abundant renewable energy resources, such as solar, wind, and hydropower, present a unique opportunity to transform its energy market and pave the way for sustainable development. One of the primary reasons for São Tomé and Príncipe's reliance on fossil fuels is the lack of a robust energy infrastructure.

The project in São Tomé and Príncipe is a public-private partnership between Global OTEC and SIDS DOCK, the Small Island Developing States (SIDS) Sustainable Energy and Climate Resilient Organization and is seen as a key way for the region to reduce the dependence on costly fossil fuels and drive the energy transition.

To remind, SIDS DOCK and Global OTEC Resources signed a memorandum of understanding in July 2021, setting out modalities for collaboration for mobilizing resources to further ocean energy projects in SIDS, and advance the development of ocean energy policies.
