Energy storage cannot participate in the electricity market as a major entity on a large scale. Second, China's energy storage profitability is not clear. Finally, China's subsidies and incentives for energy storage are not as high as those in the United States. However, China's energy storage is developing rapidly.

Due to high power density, fast charge/discharge speed, and high reliability, dielectric capacitors are widely used in pulsed power systems and power electronic systems. However, compared with other energy storage devices such as batteries and supercapacitors, the energy storage density of dielectric capacitors is low, which results in the huge system volume when applied in pulse ...

Superconducting magnetic energy storage (SMES) systems store energy in the magnetic field created by the flow of direct current in a superconducting coil that has been cryogenically cooled to a temperature below its superconducting critical temperature. This use of superconducting coils to store magnetic energy was invented by M. Ferrier in 1970. [2] A typical SMES system ...

Insufficient experience is the reason why energy storage system standards are not easy to establish. At present, the United States, Canada, and Germany all have national standards for the safety of energy storage systems. To enter the market of these countries, prospective companies must pass the country's safety certification process.

In order to support equity goals, energy storage projects must provide real benefits to the community in which the project is located and for the people it serves. The developers of equity energy storage projects should be required to demonstrate these benefits in their plans and confirm these benefits after projects are complete.

Super-capacitor energy storage, battery energy storage, and flywheel energy storage have the advantages of strong climbing ability, flexible power output, fast response speed, and strong plasticity [7]. More development is needed for electromechanical storage coming from batteries and flywheels [8].
