

# Is solar power worth it in California

Is home solar in California worth it?

The beauty of home solar in California is that it addresses all three issues all at once, and is therefore well worth it- even with NEM 3.0 solar billing. If you're going to put solar panels on your roof, you might as well get the most out of them. So, let's look at some tips for maximizing bill savings with a NEM 3.0 solar system.

How many kW does a solar system cost in California?

The average California household needs a 7.33 kW system to offset enough energy costs to make solar viable. Depending on your household energy usage, you might need a smaller or larger system. Average solar panel cost by system size in California

Is solar still worth it?

Spoiler alert: Yes, solar is still worth it for bill savings under NEM 3.0. The savings won't be the same as your neighbor's system that was grandfathered into NEM 2.0, but a home solar is still far more affordable than buying utility electricity in California. In this article, we'll cover two main topics:

Is California a good state for solar energy savings?

In fact, even with NEM 3.0 in effect, California is likely to remain the top state for solar savings because the key ingredients for savings - sunshine and high grid electricity prices - aren't going anywhere. And it's important to remember that energy cost savings is just one of many benefits of rooftop solar.

Are solar panels a good option in California?

California as a whole experiences an incredible 278 days of sunshine a year, which means that solar panels are a great option for most residents. However, latitude has an effect on solar collection potential, as homes closer to the equator will receive more direct sunlight.

Is installing solar panels in California cheaper than other states?

Installing solar panels in California is less expensive compared to other states. Some or all of the mortgage lenders featured on our site are advertising partners of NerdWallet, but this does not influence our evaluations, lender star ratings or the order in which lenders are listed on the page. Our opinions are our own.
