Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

Which technologies are most suitable for long-term storage applications?

capacity costs (Figure ES.1). Generally, technologies with low energy-capacity costs and high power-capacity costs (the blue area in the figure) are most suitable for longer duration storage applications (up to multiple days) and less frequent charge-discharge cycles; these include thermal, chemical, metal-air battery, and
