

# Leasing solar panels vs buying

What is the difference between buying and leasing solar panels?

There are three major differences between buying and leasing solar panels: If you purchase a solar system, either with cash or a loan, you own the system and receive 100% of the benefits that come with it. That includes the 30% federal solar tax credit and any other state, local, or installer incentives.

Should you lease or buy solar panels?

If you can't purchase solar panels outright or finance them with a loan, leasing solar panels is still a compelling option. You can reduce your electric bill, perhaps take advantage of net metering, and still get the benefit of clean energy at your home.

Do solar leases cost the same a month?

Solar leases also don't cost the same from month to month, making it more difficult to keep the rest of your finances in order. Many solar leases also have price escalators, which are planned increases in your monthly payments over the lifetime of the lease.

What is the difference between a solar loan and a lease?

If you purchase solar panels with a solar loan, you will have monthly payments. These payments however, will be fixed through the term of the loan. Solar leases, on the other hand, usually include a price escalator, which outlines the amount in which the monthly lease payments will increase each year.

Should you buy solar panels with cash?

Not everyone can afford to buy solar panels upfront, so there are financing options, such as solar leases, to help people who want to go solar but don't have the cash on hand. Buying solar panels, whether it be with cash or through a solar loan, will give you the best long-term solar savings.

Are solar leases worth it?

Solar leases and PPAs are often conflated, but they're slightly different. "In general, owning a solar installation is the best way to realize long-term financial benefits. Solar leases can be worth it in certain very specific circumstances," says Ben Zientara, a solar industry and policy analyst at SolarReviews.
