

What are photoluminescent pigments made of?

Our photoluminescent pigments glow naturally in the dark and react to UV black lights. Ultra Glow Powder: Choose from 15 unique colors with the longest and most vivid glow for a medium size particle of around 50 microns. It is made from the highest quality strontium aluminate doped with europium and dysprosium.

What industries does luminescent work in?

We operate in all industrial sectors: aeronautics, food, automotive, construction, cosmetics, defense, energy, luxury goods, medical, transportation... Our factory ensures the industrial production of luminescent materials in compliance with our commitment to quality (ISO 9001 certification) and security of supply.

What are glow powders & glow pigments?

Glow powders and glow pigments are available as premium glow powders and professional night glow powders since they have been produced on the basis of strontium aluminate. This has significantly increased colour intensity, duration of effect and durability.

Luminous powder purple phosphorescent color pigment with afterglow effect, for paint, resin and varnish, among others. Quantity: 40g Material: Strontium Aluminate (SrAl_2O_4) Our luminous powders Here you get great creative glitter... Fluorescent powder orange 40g - Phosphorescent...

What are the pitfalls of luminescence?

By experience, we know the main pitfalls encountered with luminescence: the choice of the physical process, the impact of the colors, the loss of properties (low performance) during the formulation and/or the industrial process, the sensitivity to ultraviolet rays, the low coloring power, etc.

What industries use noctilucent materials?

Another important sector is the manufacturing industry. Varnishers, painters, typesetters and printers like to mix the noctilucent substances with colourless carrier fluids and binders. These can be resin or epoxy resin, varnish, wax or gel. For indoor use, solvent-free carriers or wallpaper paste are recommended.

Product details: Photoluminescent pigment (luminous powder, long afterglow fluorescent powder) is a kind of light energy storage powder which can glow in the dark after absorbing various visible light under 450 nm and can be reused for many times. The product can be mixed as additive with the transparent media as coating
