First, the ratio of PV AC power to battery AC power must not exceed 150%. Or, working backwards, the AC power output of the battery must be at least two-thirds of the AC power output of the PV array. For example, if we have a battery with a rated power output of 10 kW, we can install a maximum of 15 kW of solar PV ( $10 \times 150\% = 15$ ).

Energy capacity is the maximum amount of energy that the battery can store. It is typically measured in milliamps &#215; hours (MAH). For example, if a battery has 100 mAH capacity and provides 3 mA for 100 hours, then it has a total energy capacity of 300 mAH. The higher the energy capacity, the longer your system can run on a single charge.
