What is the function of the control device of energy storage charging pile?

The main function of the control device of the energy storage charging pile is to facilitate the user to charge the electric vehicle and to charge the energy storage battery as far as possible when the electricity price is at the valley period. In this section, the energy storage charging pile device is designed as a whole.

How much power does a mobile charging pile use?

The power of mobile charging piles that we have developed is 7 kW so far. And there is energy loss when using mobile charging. The electricity cost of mobile charging pile for consumers is set as 1.5 yuan/kWh, and users should pay an additional 35-yuan service fee for pile delivery each time. The charging stations in the market vary a lot in size.

What is a charging pile?

The charging pile (as shown in Figure 1) is equivalent to a fuel tanker for a fuel car, which can provide power supply for an electric car.

Why do mobile charging piles need a lot of space?

For mobile charging piles, the influence of high land cost is less significant. The reason is that fixed charging needs a parking place for each pile; the charging station must buy or rent a huge space. While a mobile charging pile is delivered to a user, it only needs a compact space for battery storage and charging.
