What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

How many provinces and cities in China are implementing energy storage policies?

At present, more than 20 provinces and cities in China have issued policies for the deployment of new energy storage. After energy storage is configured, how to dispatch and operate energy storage, how to participate in the market, and how to channel costs have become the primary issues which plague new energy companies and investors.
