What is NextGen renewables SRL doing on International Women's Day?

At Nextgen Renewables Srl we believe in fostering local initiatives and supporting community activities while constructing our plants. This project is a perfect example of how we integrate sustainable practices with community engagement. On International Women's Day, we celebrate the innovative women in the renewable energy sector.

Do renewables account for most new electricity generating capacity in 2021?

U.S. Energy Information Administration, "Renewables account for most new U.S. electricity generating capacity in 2021," U.S. Energy Information Administration, 11 January 2021. [Online].

Should you buy a next-generation battery?

Next-generation batteries are also safer (less likely to combust, for example), try to avoid using critical materials that require imports, rare minerals, or digging into the earth, and can store more energy (letting you drive further in your electric vehicle before finding a charging station, for example).

Will renewables become the main source of electricity in 20-30 years?

Given advances in intermittency mitigation and storage, renewables may become the principal source of electricity in 20-30 years. Private sector investments spur technological innovation and lower energy costs while attracting the best and brightest. This green energy bonanza is a win for the consumer, wider economy, and environment.
